Experiment : 7

❖ Aim :

To design and develop an E-commerce Website using HTML, CSS, and JavaScript that allows users to view products, add items to cart, and simulate checkout functionality.

---

❖ Tasks :

• Project Setup & Introduction – Create a project folder named ecommerce_website and add HTML, CSS, and JavaScript files with proper linking and basic homepage.

• Product Listing Page – Display products with name, price, description, and Add to Cart button using cards or grid layout.

• Styling & Layout – Apply CSS for product cards, buttons, typography, and proper page layout.

• Shopping Cart Functionality – Add products to cart, display items dynamically, show quantity and total price, and allow item removal.

• Cart Summary & Price Calculation – Calculate individual item totals and overall cart total dynamically.

• Checkout Simulation – Create a checkout section to collect basic user details and display order confirmation message.

• Enhanced Features (Bonus) – Add quantity buttons, store cart data using browser storage, and improve UI with effects.

---

❖ Tech Stack Used :

• HTML • CSS • JavaScript

---

## ❖ Html Code :

## ➤Index.html :

```
{% extends 'store/base.html' %}
